

OCTO GAME

ATARI® GAME PROGRAM™ INSTRUCTIONS

9 SURVIVAL
LEVELS

1 PLAYER

THANK YOU

Thanks for trying
out this game.

Let me know how I
can make it better.

NOTE: Always turn the console power switch off when inserting or removing an ATARI® Game Program™ cartridge. This will protect the electronic components and prolong the life of your ATARI® Video Computer System™ game.

1. THE GAME BEGINS

On a nameless station beyond the mapped stars, a debt-relief bureau announced the first interplanetary children's game show. The prize was a clean slate. The fine print was printed in a font too small for most tentacles. Contestants were promised food, fame, and a fresh start, then quietly delivered to an arena watched by an enormous nursery automaton. The Directorate called it research. The contestants called it a very bad morning.

At the starting line, the rules sound simple. When the Watcher turns away and the signal glows green, move. When she turns back and the signal burns red, freeze completely. A twitch, a wobble, or an overconfident tentacle can end your run. Outsmart the trees and boulders, beat the merciless clock, and survive nine rounds. Fame, freedom, and a commemorative scratch-n-sniff sticker await the last octopus standing.

2. GAME PLAY

THE SIGNAL

Green means go.
Red means stop.

SCREEN ELEMENTS

YOUR MISSION

Guide your octopus from the starting line to the finish line. Move only while the signal is green. Before the Watcher turns back and the signal turns red, release the joystick and become perfectly still.

HOW IT WORKS

GREEN LIGHT

Green means go. Hold UP to advance toward the finish line. Use LEFT and RIGHT to steer around obstacles. The signal timing is unpredictable, so watch the light and keep your tentacles ready.

RED LIGHT

Red means stop. Any joystick direction during a red light causes immediate elimination. Release the controller completely until the signal turns green. The timer keeps running while you wait.

Move on green, freeze on red, and reach the finish line.

2. GAME PLAY CONTINUED

THE OBSTACLE COURSE

Some rounds are clear. On obstacle levels, one tree and two boulders block the route. Their positions change from round to round, and each obstacle has solid collision. Steer around them while the light is green.

THE TIMER

Every round begins at 999. The countdown reaches 000 after about thirty seconds. Reach the finish line before time runs out.

999 → 000

NINE ROUNDS

Survive one round to advance to the next. The signal intervals become shorter as the levels advance. Levels 2, 4, 6, and 8 add the tree and two boulders to the challenge.

1 2 3 4 5 6 7 8 9

KEEP GOING

Reach the finish line to clear the round. You only have one life. If you move during a red light, you are eliminated and the game ends. Press FIRE after elimination to begin again at level 1. Clear level 9 to open the final survival screen.

3. USING THE CONTROLLERS

Use your Joystick Controllers with this ATARI® Game Program™ cartridge. Be sure the Joystick Controller cables are firmly plugged into the CONTROLLER jacks at the back of your ATARI® Video Computer System™ game. For one-player games, use the Joystick Controller plugged into the LEFT CONTROLLER jack. Hold the Joystick with the red button to your upper left, toward the television screen. See Section 3 of your owner's manual for further details.

If you are eliminated, that is the end of the game. Press the FIRE button to start a new game.

4. CONSOLE CONTROLS

Press the GAME RESET switch to begin a new run. After you clear round 9, press GAME RESET to start over at round 1. The score and timer return to their starting values, and the game begins again.

GAME RESET → START OVER

5. SCORING

Your score starts at 0000 and carries from round to round. Finish each round to add bonus points, then keep moving until you clear round 9. Compete with your friends to see who can finish all 9 rounds and get the highest score.

ROUND CLEAR +100

Reach the finish line.

TIME LEFT + TIMER

Every point still showing.

TOTAL SCORE CARRIES

Added to your running score.

CLEAR ALL NINE ROUNDS

A round is won when your octopus reaches the finish line. Clear round 9 to win the game. The final survival screen appears with your score.

SCORING EXAMPLE

You reach the finish line with 742 on the timer. Your round score is 100 completion points plus 742 time points.

$$100 + 742 = 842 \text{ POINTS}$$

The score continues into the next round. If your score passes 9999, the display stays at 9999.
